Dear Sir:

A study is being made to determine the circuitry necessary for the 500 to 1000 mc amplifier, model 50100T. Consideration is being given to the coaxial type transistor, Philco types L5442 and L5431. Amplifier types I through IV used grounded emitter operation. The coaxial transistor lends itself well to grounded base operation. Hence, new circuitry is needed.

The 600 to 700 mc, model 6070T amplifier will probably use the same type of circuit configuration as model 50100T.

Very truly yours,

25X1

Project Director
